

Help safeguard unborn babies!
We demand mandatory labelling of all alcoholic beverages and foods that contain alcohol in (Land) and that the risks associated with alcohol consumption during pregnancy be included in advertisements for any such products.

Even today, pre-natal alcohol exposure is the leading cause of non-congenital birth defects including brain damage. Fetal Alcohol Spectrum Disorder (FASD) is disability that could be eliminated if pregnant women did not drink alcohol.

FASD is a matter of public concern!

Support our campaign to prevent FASD and sign the petition at **change.org** <https://chn.ge/2Oifk9b>
